

Responsible AI Policy Memo

Week 3 written homework: principles, implementation, fairness, privacy, and assessment.

Name

Date

Due

Your goal is not to discover the instructor's preferred opinion. Your goal is to make a defensible ethical judgment: distinguish facts from assumptions, apply the readings accurately, represent a serious counterargument, and explain what evidence or condition could change your view.

Deliverable

FORMAT

One integrated policy memo

Length: 800–1,000 words, excluding the AI-use disclosure and references.

Structure: Use headings A–D from this sheet. Submit as a PDF or in the format your instructor specifies.

EVIDENCE

Use at least two assigned reviews

Use brief parenthetical references. Example: **(Jobin et al., 2019)**.

No outside sources are required. Do not invent page numbers, quotations, findings, or citations.

Assigned Reading Path

Read the abstract and targeted section listed for each review. Then choose at least one paper for a deeper reading. Do not purchase an article: use the accessible route below, your university library, or an instructor-provided excerpt.

ABSTRACT REQUIRED

Jobin, Ienca, and Vayena (2019)

The global landscape of AI ethics guidelines

Publisher page

Read: abstract; full results/discussion only if library access is available. Focus on recurring principles and divergence in interpretation or implementation.

OPEN ACCESS

Corrêa et al. (2023)

Worldwide AI ethics: A review of 200 guidelines and recommendations for AI governance

Publisher page

Read: abstract, discussion of earlier guideline reviews, and closing limitations/conclusions. Focus on the broader principle map and the distance between principles and governance mechanisms.

CHECK ACCESS

Giarmoleo et al. (2024)

What ethics can say on artificial intelligence: Insights from a systematic literature review

Publisher page

Read: abstract and Section 4, "Discussion on the findings and conclusions." Focus on ethical concerns, proposed responses, and act- versus agent-centered approaches.

OPEN ACCESS

Groen, Sharon, and Becker (2026)

An overview of AI ethics: moral concerns through the lens of principles, lived realities and power structures

Publisher page

Read: abstract, Table 1, and Section 6 conclusion. Focus on what each lens reveals and overlooks.

Access rule: Your grade must not depend on purchasing a paper. If full text is unavailable through the links or library, tell the instructor and use the assigned abstract or excerpt. The instructor should confirm access before requiring any full article.

Reading Matrix

Use short phrases. The last column matters: a review can provide a framework without proving every prediction or outcome discussed in class.

Reading	Main question	One framework or finding	One limitation	One claim it does not establish
Jobin et al.				
Corrêa et al.				
Giarmoleo et al.				
Groen et al.				

In-Class Baseline: Question 7

A student follows the course policy and discloses: "I used ChatGPT to brainstorm, outline, and rewrite my draft." The final essay is much better than the student's usual writing. Another student writes alone and earns a lower grade. Is this fair?

Complete the class exit ticket without AI and retain it as your baseline. If you are absent or need an accommodation, complete the same prompt independently before using AI, or use an instructor-approved equivalent.

State your judgment, one condition that could change it, and what the grade should represent.

Memo Prompt

A. Diagnose the research-paper case ~150 words

Separate verified case facts, reading-supported claims, assumptions, and inferences. Explain how transparency, fairness, privacy, accountability, and safety appear in the case. Verified case facts are only facts stated in the assigned scenario; reading-supported claims are grounded in assigned readings; label your own reasonable extensions as inferences.

B. Challenge the ban-and-detector response ~200 words

Give the strongest ethical defense of a university ban and the strongest criticism of it. Apply at least two assigned reviews. Do not claim that these reviews establish detector accuracy, disparate impacts, classroom mistrust, concealment, or employment outcomes unless you have separately approved evidence.

C. Write an operational policy ~150–200 words

Write one policy paragraph that specifies permitted AI use, required disclosure, prohibited use, privacy and upload limits, how instructors verify learning, and the default when assignment instructions are silent. Avoid phrases such as “use AI responsibly” unless you define the required behavior.

D. Test your policy against Question 7 ~250–300 words

Explain why allowing AI can be fair and why it may still be unfair. Address equal rules, equitable access or capability, and assessment validity. State what the grade should measure, reach a final judgment, and identify one condition that would change your conclusion. If rewriting was explicitly permitted, explain where responsibility for any mismatch belongs.

AI Use for This Homework

The purpose of this assignment is to assess your ethical reasoning. The course therefore permits AI support for learning and feedback while reserving your claims, selected argument structure, submitted prose, and judgment for you.

Allowed with disclosure

- Clarify a concept from an assigned reading.
- Brainstorm alternative arguments or counterarguments.
- Compare possible ways to organize claims you already developed; select and substantially revise the outline yourself.
- Ask for feedback that identifies a problem, asks a question, or suggests a revision strategy.

Not allowed

- Generate or rewrite sentences or paragraphs for submission.
- Replace your analysis, judgment, or reading of the sources.
- Invent, repair, or confirm a citation without checking the source.
- Upload peer work, private course materials, personal data, or confidential information.

Privacy and evidence: Use only tools permitted by your instructor or university. You will not be required to surrender a private account, device, or full chat history. Your instructor may ask you to explain your reasoning or compare the memo with your in-class baseline.

AI-Use Disclosure not included in word count

Write approximately 50 words naming the tool, the purposes for which you used it, and the stages it affected. If you used no AI, write: "I did not use AI for this assignment."

Grading Rubric

Criterion	Points
Ethical reasoning and use of lenses: distinguishes facts, assumptions, principles, lived effects, and institutional responsibility.	25
Evidence and claim calibration: uses assigned readings accurately, cites at least two, and does not present inferences as findings.	20
Counterarguments: represents both sides fairly before reaching a judgment.	20
Policy quality: provides specific, internally consistent, and usable rules rather than slogans.	20
Judgment and reflection: explains what the grade should represent and identifies a condition that could change the conclusion.	10
AI-use disclosure: complete and consistent with the submitted work.	5
Total	100

Important: You are not graded on choosing "fair" or "unfair." You are graded on the quality, honesty, and consistency of your reasoning.

Submission Checklist

- ☐ My memo is 800–1,000 words and uses headings A–D.
- ☐ I completed the reading matrix and used at least two assigned reviews.
- ☐ I distinguished sourced claims, verified case facts, and my own inferences.
- ☐ I presented a serious counterargument before stating my conclusion.
- ☐ My policy gives operational rules, including a silent-instructions default.
- ☐ I included an accurate AI-use disclosure or stated that I used no AI.
- ☐ I verified every citation and did not upload protected or private material.
